

# Crash Rails

Models WG-4B, WG-6B and WG-8B (shown)

Square profile crash rails in three sizes provide unmatched protection for any application. Available in approximately 4" (101.5mm), 6" (152.4mm) and 8" (shown), these versatile products can be used for many applications. Mount horizontally in corridors for protection from carts, gurneys and other heavy rolling traffic. In conference areas, they can be used as chair rails. Use horizontally or vertically behind beds in patient rooms. All crash rails use continuous aluminum retainer, not clips, for maximum strength.

## About Alpar Architectural Products

Alpar Architectural Products LLC provides impact protection for walls with the least possible environmental impact. All of our products are FREE from polyvinylchloride (PVC), petroleum and persistent bioaccumulative toxins (PBTs) and are made from recycled and rapidly renewable materials including deTerra® biobased polymer, aluminum and stainless steel.

DeTerra® biobased polymer looks and feels like traditional plastics but is made from more than 90% rapidly renewable materials and are grown and processed into compound in the USA. It is the only wall protection material that is approved by the EPA as biodegradable and that can be composted. It is Class 1/A fire rated and far outperforms PVC, PETG and ABS for flame spread and smoke density when tested to ASTM E84. It also outperforms these materials in many mechanical, chemical and stain resistance tests relevant to wall protection.
